

STRAPJACK

The RAMBOR® Strapjack is used as temporary roof support or in pairs to support roof straps / steels (a "Fit for Purpose" analysis should be carried out first).

They are ideal as a quick to install, non-permanent support for a variety of lifting and support functions, suitable for heights between 2 to 3.5 metres.

The Strapjack is fitted with yield valve in case of roof closure. An extendable T/Bar handle is available as an option, allowing the Operator to distance themselves from hazards during installation.
