6 in 1 Blade Sharpener

Part No	Type	Pack Qty
SJ-4056BS	6 In 1 Blade Sharpener	5

- Ideal For Sharpening Secateurs, Shears, Loppers Scissors, Knives And Other Small Cutting Tools
- 4 Sharpening Options To Cover A Wide Range Of Different Blade Types
- Cleaning Sponge And Lubricating/Anti-Corrosion Oil Stored Inside Handle
- Soft-Feel Non-Slip Grip
- Built-In Hand Guard

How To Sharpen Your Blade

- Secure The Tool To Be Sharpened Either In A Vice Or Held Against A Firm Surface, With The Edge Of The Blade Facing Upright.
- Select Optimum Sharpener Based On Icons Printed On The Handle.
- Press Down Firmly And Pull The Sharpener Towards Yourself Running It From One Edge Of The Blade To The Other, Usually 4 To 5 Strokes Will Be Sufficient.
- Cleaning Sponge And Anti Rust Oil Are Provided To Wipe Down Sharpened Blade.

Bypass Secateurs Are designed to prune live stems, the two blades work like a pair of scissors with the blades passing each other to make the cut. They are suitable for cutting delicate stems as the action is less likely to cause bruising to the stem.

RAZORSHARP PRO secateurs

The new Spear & Jackson Razorsharp® PRO cutting tool range of loppers & secateurs has been designed to satisfy the needs of professional gardeners and landscapers. Competitively priced, the range features drop forged carbon steel interchangeable blades, forged aluminium handles for strength and durability and adjustable blade tensioning.

The Spear & Jackson Predator Bow Saw range offers two types of blades
Peg Tooth (Dry) & Raker Tooth (Wet).

PEG TOOTH BLADE (DRY)

The peg tooting blade is for mature and dry wood. Every third gullet is extended for high chip removal and is made uniquely for fast and efficient cutting of mature and dry wood.

RAKER TOOTH BLADE (WET)

The raker tooting blade is for live and green wood. Every fifth tooth is raker and unset which functions like a chisel to remove the chips out of the green wood.

PROFESSIONAL WOODSAWS

SPEAR & JACKSON began making saws well over 200 years ago. The wealth of experience gained over this period of time is just one of the many reasons why SPEAR & JACKSON have a unique reputation.

The SPEAR & JACKSON PREDATOR™ Series is a range of handpoint saws especially created to meet the most demanding professional. The range includes saws for four specialist applications First Fix, Second Fix, Laminate, and UPVC.

The range also includes our multi-purpose Universal tooth saw, our Triplefast triple ground tooth saw and our Predator X fleam tooth saw. All saws are heat treated using the very latest technology to ensure outstanding durability and performance. PREDATOR™ are quite simply the best saws you can buy!

HAMMERS

All SPEAR & JACKSON hammers are made from first class materials and manufactured to the highest product specifications, thus ensuring maximum strength and reliability. Forged heads are expertly heat treated and finished, then fixed to hickory or fibreglass shafted handles. All Steel and Anti Vibration hammers are forged with the head and shaft as a unit. This ensures reliability and balance, plus ensuring superior performance for the professional and occasional user alike.

CRAFTSMAN-MADE QUALITY FOR
OVER TWO HUNDRED YEARS

WHS (William Hunt & Sons) started in 1782 making forged products in Oldbury near Birmingham. By 1960 their brick trowels were well known throughout the world with the 4" archaeology trowel deemed "the industry standard."

By expertly bringing together advanced technology, the best design and a genuine commitment to total quality, WHS offers a comprehensive range of superb pointing and brickwork trowels. Each of our trowels are crafted from the finest carbon steel with a solid forged blade and through tang for supreme strength. Handles are available in both traditional wooden or the latest soft feel ergonomic design. WHS is the first choice for ultimate comfort and performance.

BUILDERS' TOOLS

plastering tools

Through a combination of advanced technologies, optimum design and a commitment to quality, we are able to offer a comprehensive range of Plastering and Drywall tools for the Professional and DIY user alike.

Tyzack Plastering Floats have been designed with the professional user in mind. With Craftsman set, pre worn blades these are ready for use by the busy professional. Under the Spear & Jackson brand there is a comprehensive range of Plastering tools for both the tradesman and DIY user. So, whatever your target market, customer expectation levels and sourcing criteria, Tyzack and Spear & Jackson are the best and only ranges you should turn to.

A HISTORY OF QUALITY IN PLASTERING

Ever since Joseph Tyzack introduced steel blades to replace traditional wooden trowels in the late 19th century, the TYZACK name has set the standard for quality plastering tools. Another innovation was a patented design enabling the blade to be attached to the tang without the need for the rivets to go right through the blade thereby ensuring a totally smooth finish. Importantly, all TYZACK trowels are hand 'dished' by time served craftsmen to create a convex blade, solving the problem of 'drag lines' when finishing.

Additional features such as hardened and spring tempered blades also ensure that TYZACK tools are strong, durable and give outstanding performance. Available in both carbon and stainless steel with a variety of blade sizes and ergonomic handle options, TYZACK is the ultimate in comfort and performance.

Blade Thickness	Application
0.24" / 0.6mm	Finishing & General Use
0.32" / 0.8mm	Laying-on
0.56" / 1.4mm	Flooring

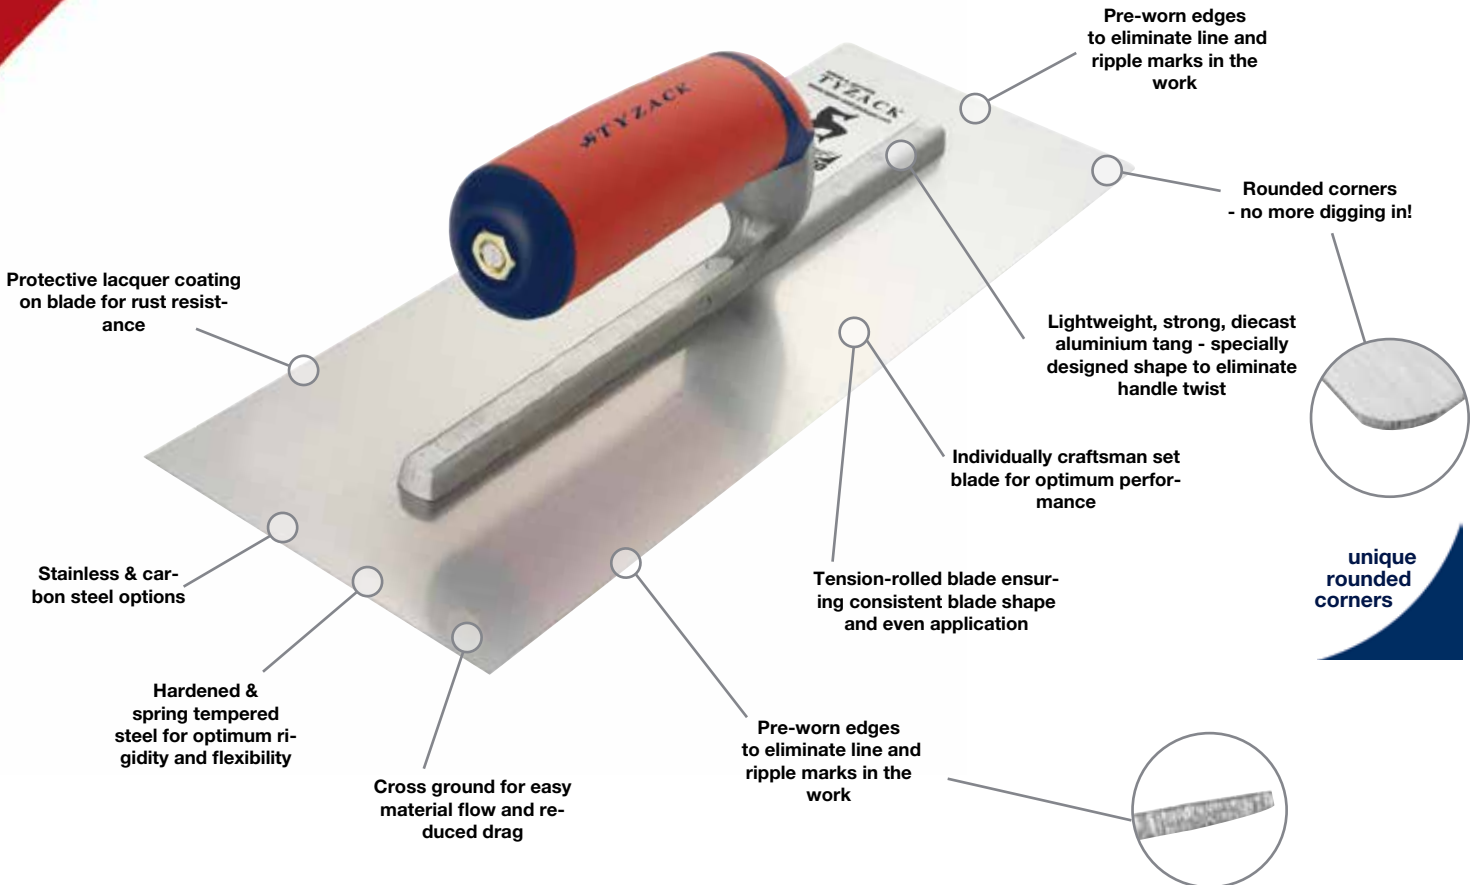

- Different Blade Thicknesses For Different Applications
- Stainless And Carbon Steel Options
- Available With Double Hang Versions For Added Strength
- Individually Hand Set By A Craftsmen

'READY TO GO' FINISHING TROWELS

Pre-worn to professional standards, our revolutionary trowel is READY TO GO right from the start! Featuring 'rounded' front corners to prevent 'drag-lines' and a pre-worn 'fine edge' on both sides for ultimate control in the finish.

RAGNI

tools

PLASTERING TOOLS
CONCRETING TOOLS
RENDERING TOOLS
TILING TOOLS

Since 1962 RAGNI proudly delivers unbeatable value for money to professional trademans around the world. All products are protected with a thin layer of transparent lacquer to prevent rust. The ergonomic handle shapes offer optimal comfort to professional users, the unique design maximizes grip, never slips or twists on its tang.

The complete Ragni range offers first class products at very competitive pricing.

Ragni Handle Types

Easi-Grip - The BI-Material Easi-Grip handle is ergonomically designed for the most comfortable feel. The technopolymer coating reduces wrist strain during prolonged use by filtering blade vibrations. Research indicates the Ragni Easi-Grip is preferred by professional plasterers.

Super Lite - Thanks to its ABS handle, the Super Lite Ragni Floats are more than 40% lighter than traditional floats but assures up to 80% of their strength. The increase flexibility and lightweight make it the optimal choice for DIY applications.

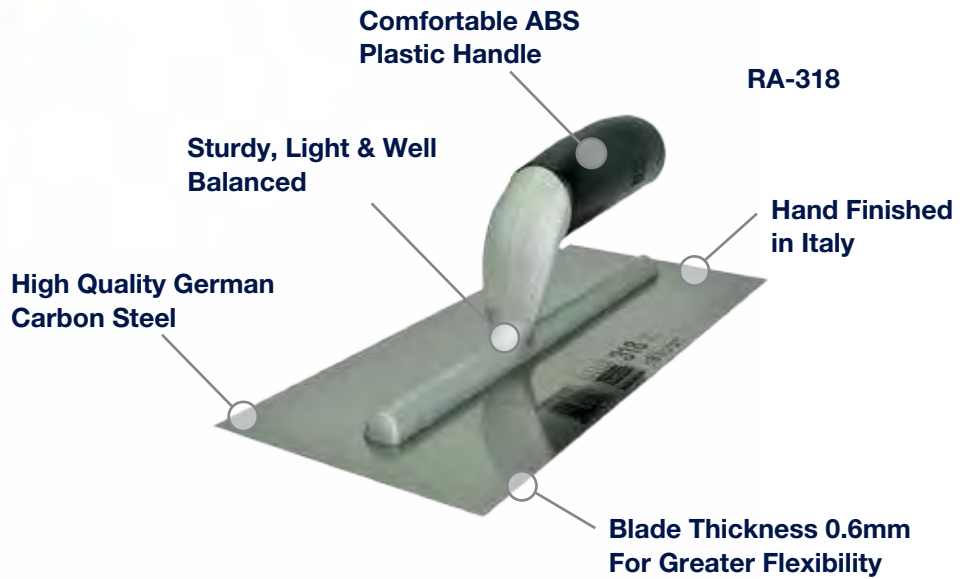

Standard ABS - The Standard ABS handle is designed to cater both the professional and DIY user. The one piece plastic handle is very durable and features finger grips to prevent slipping. Its ergonomic design and lightweight make it a perfect choice for any professional or DIY application.

TRULINE builders tools

Since 1947 Harvie Morris Pty Ltd - an Australian family business have produced and sold thousands of plastering and cementing tools in Australia and overseas.

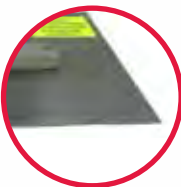

All Truline premium trowels (except stainless) are manufactured from a superior grade manganese alloy steel formulated for high tensile strength, flexibility and long life.

Shanks - are made from a silicon magnesium aluminium alloy scientifically heat treated to exacting specifications to provide a tensile strength of 10 tons per square inch. This is the lightest, most rigid yet resilient shank, ever produced for a plasterers' trowel.

Handles - have been designed with on the job Tradesmen to a comfortable banana shape and made with a soft grip moulding and securely held with a non-rusting adjusting nut.

Blades - are made from hardened and tempered tungsten chrome alloy steel, produced to our own specifications by Sheffield's largest steelmaker. Blades are hand riveted and ground and every trowel is individually tested for trueness and finish.

Spraying Tips

- For a great finish, the thinned paint should be the consistency of milk.
- Always use a test piece before spraying your project.
- Preparation is the key to a good finish. Make sure surface is clean and smooth before spraying.
- Make smooth even passes about 200mm from the job.
- Do not overload the job with paint. Multiple light coats will stop paint runs and sags.

Eclipse saw blade robot

**ECLIPSE - THE NUMBER ONE NAME
IN METAL CUTTING**

With a proud history of hacksaw blade manufacture stretching back nearly 100 years, Eclipse hacksaw blades have become synonymous with engineering excellence and continuous product development. As a result, Eclipse is now firmly established as the number one global metal cutting brand.

**ECLIPSE PLUS 30 - A
REVOLUTIONARY BLADE DESIGN**

Following many years of research into the most effective cutting profile possible, Neill Tools has developed an entirely new blade tooth shape that enables a 30 percent faster cut over conventional blades. The result of this is the Eclipse Plus 30 range.

Why are Eclipse Plus 30 blades faster?
- They are precision-ground to the finest tolerances, making them much sharper than conventional milled blades.

Their tooth geometry has been designed to give a positive rake angle that is more aggressive and therefore faster than conventional milled blades. Our tests show a 30% faster cut, hence the name 'Plus 30'.

**ECLIPSE PLUS 30 - CONFIRMED BY
INDEPENDENT TESTING**

Independent testing by the University of Northumbria in Newcastle has verified the claims made about the Eclipse Plus 30 blade. Using both machine and hand testing, the Eclipse Plus 30 has been thoroughly tested and the improvement in cutting ability has been confirmed.

These two inset shots illustrate the difference between a ground and a milled blade under magnification.

HAND HACKSAW BLADES

Plus 30 Flexible BiMetal HSS

Part No	Blade Size mm	Blade Size inches	Teeth per 25mm	PIN dia. mm	Pack Size
EC-AA3045E	300 x 12.5 x 0.63	12 x 1/2 x 0.02	18	4	100
EC-AA3046V	300 x 12.5 x 0.63	12 x 1/2 x 0.02	24	4	100
EC-AA3047R	300 x 12.5 x 0.63	12 x 1/2 x 0.02	32	4	100

A virtually unbreakable bimetal blade for superb cutting performance, wear resistance and safety.

The combination of an M2 High Speed ground cutting edge, electron-beam welded to a flexible alloy back gives a level of cutting power and flexibility that is far superior to edge hardened or conventional flexible blades.

The unique ground tooth profile of the Plus 30 blade produces a faster and more aggressive cutting action that requires less effort and is more efficient than a standard blade.

Cuts through all types of metals including alloy and stainless steels.

A rigid, All Hard ground blade for highly accurate cutting and long life.

- 30% MORE CUTTING POWER
- SHARPER FIRST CUT
- LONGER LIFE

EC-AE47K	300x12.5x0.63	12 x 1/2 x 0.025	32	4	100

A rigid, All Hard blade for highly accurate cutting and long life.

Manufactured entirely from top quality High Speed Steel, each blade is precisely hardened throughout its entire width to give a strong, rigid back, ensuring a perfectly straight cut time after time.

For the best performance from All Hard blades the workpiece should be securely held in a clamp or vice to prevent shattering of the blade and safety goggles should be worn.

Cuts through all types of metals including alloy and stainless steels.

HAND HACKSAW BLADES

HAND BLADE TOOTH PITCH SELECTION

To select the hacksaw blade with the correct number of teeth for the task, consider the following elements:

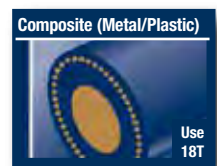

- **How thick is the material to be cut?**
For thin sections, the highest number of teeth should be used and vice versa for thicker sections.
- **What type of material is to be cut?**
The table opposite is a guide to tooth pitch selection for different materials and various thicknesses.

SAW FRAMES

Can maintain blade tension at over 80kgs to ensure accurate and straight cutting performance

Professional Hacksaw - Soft Grip

Part No	Description	Length	Height	Pack
EC-70-22TR	Hacksaw SF	400mm(16")	132mm(5 1/4")	5

The new 22T has soft-feel handle, Epoxy coated moulded section steel frame and comes complete with an Eclipse +30 bimetal blade

Professional Hacksaw

Part No	Description	Length	Height	Pack
EC-20TND	Prof. Hacksaw	465mm(18 3/8")	130mm(5")	6

The world famous, best selling hacksaw featuring a die cast handle, tubular frame complete with an **ECLIPSE** bimetal blade. The 20T has set the standard for all other makes - but the best is still the original 20T from **ECLIPSE**

Hacksaw

Part No	Description	Length	Height	Pack
EC-422	Hacksaw - Box Frame	400mm(18")	135mm(5 1/4")	6

A lightweight, economical hacksaw with a strong, box section tubular steel frame and a comfortable soft grip handle. Adjustable blade tensioning for 55 degree cutting, can also be used as a Compass Saw.

Hacksaw - Fluro Orange

Part No	Description	Length	Height	Pack
EC-424	Hacksaw - Box Frame	400mm(18")	135mm(5 1/4")	6

A lightweight, economical hacksaw with a strong, box section tubular steel frame and a comfortable soft grip handle. Fluorescent orange body highlights for easy visibility. Adjustable blade tensioning for 55 degree cutting, can also be used as a Compass Saw.

Hacksaw - Lightweight

Part No	Description	Length	Height	Pack
EC-16TND	Hacksaw	430mm (16 5/16")	132mm(5 1/4")	10

A lightweight, economical hacksaw with a strong, box section tubular steel frame and a comfortable and durable cast aluminium handle. In addition, the extra long location pin gives increased security of the tensioning bit. Comes complete with an **ECLIPSE** bimetal blade

Mini Hacksaw

Part No	Description	Length	Height	Pack
EC-70-675R	Mini Saw	250mm(10")	100mm(4")	30

A more substantial version of the Junior hacksaw with plastic moulded pistol grip handle, steel frame and **ECLIPSE** blade. Blade tensioning device incorporated in the handle

Coping Saw - Soft feel handle

Part No	Description	Length	Height	Pack
EC-70-CP1RSF	Coping Saw SF	317mm(12 3/8")	130mm(5 1/8")	5

Coping saw for cutting and shaping wood, with a soft-feel handle for extra comfort and steel frame. Blades can be positioned at any angle to the frame

Fret Saw - Soft feel handle

Part No	Description	Length	Height	Pack
EC-70-FS1RSF	Fret	270mm(10 5/8")	300mm(11 7/8")	5

Fretsaw for fine cutting work in thin materials such as wood, bone, plastics, etc - ideal for model makers. Comfortable soft feel handle and steel frame

Piercing Saw - Soft feel handle

Part No	Description	Length	Height	Pack
EC-PS51SF	Piercing Saw	290mm(18 1/4")	90mm (3 1/2")	5

Piercing saw is ideal for fine metalwork and jewellery. Comfortable soft feel handle and steel frame. Spring steel blade with precision milled teeth, cuts on backward stroke.

SAW TOOTH SETTER, JEWELLERS & AVIATION SNIPS

General Purpose Saw

General purpose saw for cutting through wood, plastics and soft metals (such as nails). Polyester coated blade and diecast 9 position handle to enable cutting in difficult positions

Part No	Description	Length	Height	Pack
SJ-72/66XR	General Purpose	465mm(18 1/4")	-	5

Junior Hacksaw

The Junior Hacksaw is universally designed to cut through metals, wood and some plastics. It features a 6" (150mm) replaceable blade and is the perfect choice for smaller jobs.

Part No	Description	Length	Height	Pack
SJ-71-14JR	Junior Hacksaw	260mm	70mm	12

Saw Tooth Setter

Used for setting teeth during the sharpening of handsaws. Solid steel construction with soft poly grips for extra comfort when in use.

Part No	Description	Length	Height	Pack
EC-94/370R	Saw Tooth Setter	180mm (7 1/4")	90mm (3 1/2")	2

Jewellers' Snips

For cutting copper, silver, gold and other soft metals. The precision hollow ground blades reduce friction for an easy cutting action and, since they are also induction hardened and tempered, they can be easily re-sharpened. Integrated stops prevent trapped fingers without compromising the jaw capacity

Part No	Size	Cutting Capacity (mild steel up to 18g)	Cutting Capacity (stainless steel up to 23g)	Pack

General Purpose Snips

For cutting sheet metal. The precision hollow ground blades reduce friction for an easy cutting action and since they are also induction hardened and tempered, they can be easily re-sharpened. The spring loaded nut allows for easy adjustment to increase the working life, whilst the high quality steel drop forged handles offer maximum strength

Centre Cut

High tensile - for cutting hard materials up to 50HRC. Centre cut, strap adjusted bolt cutters with lightweight tubular handles that do not compromise strength – every pound of force applied is amplified to produce 80lbs (36kg) of force between the jaws. To maximise safety the built in stops will yield rather than break, whilst the drop forged jaws are machined to precise specifications for a resilient body and rigid cutting edge

Centre Cut

High tensile - for cutting hard materials up to 50HRC. Centre cut, arm adjusted bolt cutters with solid forged handles for maximum strength - every pound of force applied is amplified to produce 80lbs (36kg) of force between the jaws. To maximise safety the built in stops will yield rather than break, whilst the drop forged jaws are machined to precise specifications for a resilient body and rigid cutting edge

PRODUCT TESTING

■ **Rockwell Hardness Testing**

The Rockwell method measures the permanent depth of indentation produced by a force/load on an indenter.

■ **Torsion Testing**

A Torsion Test is performed to determine material behaviour in torsional loading or rotational torque loading.

■ **Tensile Compress Testing**

The Tensile Compression Test is an evaluation of the mechanical behavior of a sample under conditions of tension and compression can be performed to provide basic material property data that is critical for component design and service performance assessment.

CLAMPS

One Handed Bar Clamps & Spreaders

Quick release trigger enables the clamp to be quickly positioned and released, whilst the jaw release clip mechanism allows the jaw to be removed and re-attached to the other end of the bar, thus converting the clamp into a spreader. The carbon steel bar and reinforced nylon body make it both tough and durable, whilst the ergonomically-designed, soft feel pistol grip handle fits easily into the hand. In addition, the toe-in feature means that, when fully closed, the jaws only meet at the top, thus providing an even clamping force across the whole depth of the workpiece. Non-marring pads firmly grip and protect the workpiece

F Clamps

DIN5117 standard clamps with an average clamping force of 300kg (660lbs). The sliding head quickly sets the clamp to the required capacity, whilst the serrated grooves on the corrosion resistant nickel plated bar prevent slippage in use. The cast iron malleable heads offer maximum strength and the wooden handle provides a firm and comfortable grip.

CLAMPS

Sash Clamps

Sash clamps have an average clamping force of 500kg (1100lbs). The ductile head and slide are guaranteed unbreakable, whilst the steel bar offers maximum tensile and yield strength. The slightly tapered jaws enable perfectly parallel clamping and the fast action rolled thread applies pressure quickly and smoothly to the workpiece

MAGNETIC LIFTERS

Magnetic lifters are quicker, easier and safer to use than slings, chains, hooks and grabs, and do not mark the load.

Onboard switching and permanent magnet technology mean installation and operation could not be easier and running costs are non-existent.

Access is only required to the load's top face, allowing for more efficient storage and handling.

Ultralift^{plus}+

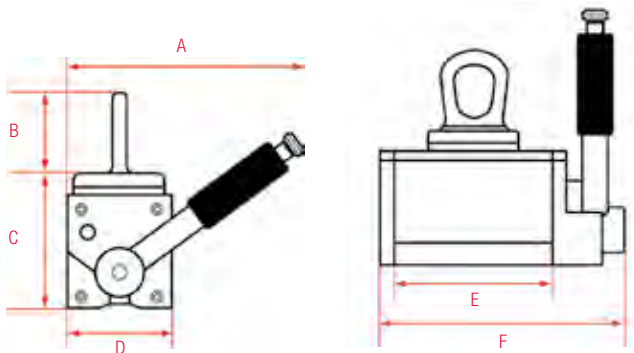

Ultralift Plus

The world's safest lifter

Lifts up to 2000kg (flat) 800kg (round)

3 safety features:

- Locking switch handle mechanism
- Unique 'Safety Shim': pre-test any load to ensure a 3:1 safety factor
- Locking eye mechanism: magnet cannot be switched off while holding a load

3:1 SAFETY FACTOR

The patented 'safety shim' allows pre-testing of the load to be lifted, irrespective of weight, material type, material thickness and surface condition. If the load passes a 3:1 safety factor is guaranteed

ALUMINIUM PIPE WRENCHES ADJUSTABLE WRENCHES

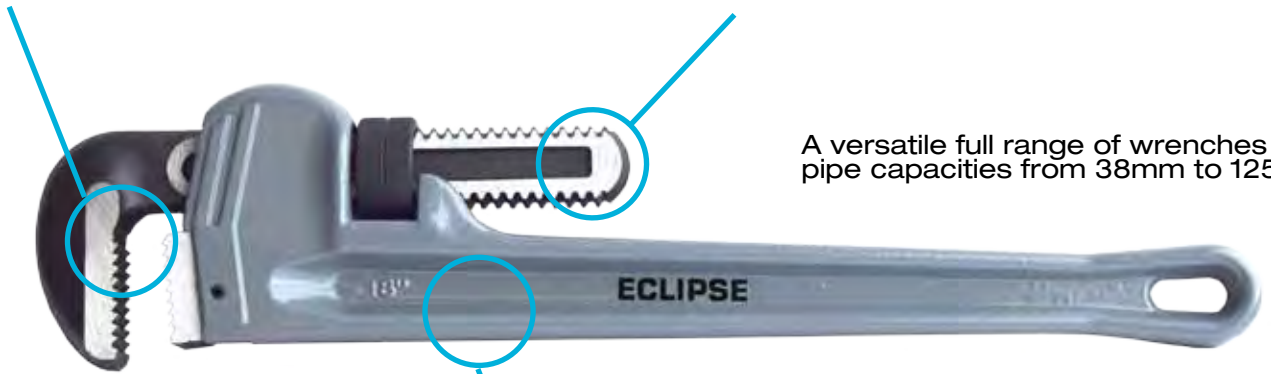

LEADER PATTERN ALUMINIUM PIPE WRENCHES

For manipulating large capacity threaded pipe joints

Induction hardened contra directional jaw teeth ensure long lasting positive grip

Handy scale markings on the hook jaw for quick adjustments to pipe dimensions.

A versatile full range of wrenches with pipe capacities from 38mm to 125mm

The frame & handle are a one piece light-weight aluminium casting.

Leader Pattern Aluminium Pipe Wrenches

Ideal for manipulating large capacity threaded pipe joints and tightening or loosening threaded collars on pipe work, nuts & bolts.

Ideal for use in plumbing, installation and automotive tasks. Not only does the extra wide jaw opening increase versatility, but the super thin head means that the wrench can be used in confined spaces. In addition, the throat depth is deeper than standard adjustable wrenches and the head is angled to offer maximum speed and efficiency. Soft grip handle for added comfort.

EC-2750HD	Heavy Duty Lazy Tong	3mm (1/8") 4mm (5/32") 5mm (3/16") 6.4mm (1/4")	1

A fixed head riveter ideal for use with stainless steel rivets up to 6.4mm. Can be used one handed, enabling better control of the work piece. Useful on vehicle maintenance, agricultural projects and construction.

Lazy Tong Riveter

Part No	Description	For use with Rivet Sizes	Pack
EC-2750	Lazy Tong	3mm (1/8") 4mm (5/32") 5mm (3/16")	1

This powerful and versatile tool has the advantage of being operated with one hand, providing no loss in efficiency. Useful on vehicle maintenance, agricultural projects and construction.

Long Arm Riveter

Part No	Description	For use with Rivet Sizes	Pack
EC-2760	Long Arm	4mm (5/32") 5mm (3/16") 6mm (1/4")	1

The long armed riveter reduces the minimum the effort required to set rivets up to 6mm. Probably the most powerful industrial hand riveter available today. Ideal for boat building and coachwork, agricultural machine maintenance, etc. Supplied with 4 interchangeable noses

Heavy Duty Long Nose Riveter

Part No	Description	For use with Rivet Sizes	Pack
EC-2720	Heavy Duty Long Nose	3mm (1/8") 4mm (5/32") 5mm (3/16")	1

THREADED INSERT SETTING TOOLS & KITS

Threaded Insert Setting Tool

Part No
1 EC-2743

Description
This thin sheet setting tool has been designed to enable threaded nut inserts to be set easily by hand. Invaluable to maintenance engineers for on-the-spot repairs. Supplied in storage wallet complete with 4mm, 5mm, 6mm and 8mm nose bushes and mandrels

Threaded Insert Setting Tool Kit

Part No
2 EC-2745

Description
As the 2743 but supplied with additional 4mm, 5mm, 6mm and 8mm threaded nutserts. Housed in a compact tool box for easy storage

SCRAPERS / PIN VICES / CHUCKS & COLLETS

Hand scrapers are designed for the removal of high spots on machined surfaces to give a smoother surface on slideways, bearings, cast iron surface plates and precision marking out plates. All scrapers have a soft feel handle and are made from high grade tool steel suitably hardened, to maintain a very keen cutting edge
